Heteroptera, Czech Republic, Moravia, Bohemia, Slovakia, faunistics, bionomics, host plant

Abstract. New and interesting records of true bugs (Heteroptera) in the Czech Republic and Slovakia are reported. *Stephanitis (Stephanitis) takeyai* Drake et Maa, 1955, *Phytocoris (Phytocoris) hirsutululus* Flor, 1861, and *Psallus (Apocremnus) aethiops* (Zetterstedt, 1838) are new for the Czech Republic, *Corythucha ciliata* (Say, 1832), *Macrolophus rubi* Woodroffe, 1957, *Macrotylus solitarius* (Meyer-Dür, 1843), *Tuponia (Chlorotuponia) hippophaes* (Fieber, 1861), and *Tuponia (Tuponia) elegans* (Jakovlev, 1867) are new for Bohemia, and *Pachycoleus pusillimus* (J. Sahlberg, 1870) and *Deraeocoris (Deraeocoris) flavilinea* (A. Costa, 1862) are new for Moravia. *Tuponia (Tuponia) macedonica* Wagner, 1957 is reported as new for Slovakia and central Europe. Occurrence of *Psallus (Apocremnus) betuleti* (Fallén, 1826) in Moravia is confirmed. All previous records of *Coranus (Coranus) woodroffei* P. V. Putshkov, 1982 from Moravia and Slovakia belong to *C. (C.) aethiops* Jakovlev, 1893, which is thus a new species for Moravia and Slovakia. Additional records of *Stephanitis (Stephanitis) pyri* (Fabricius, 1775), *Acetropis (Acetropis) longirostris* Puton, 1875, *Dichroosecytus gustavi* Josifov, 1981, *Psallus (Apocremnus) montanus* Josifov, 1973, *Amphiareus obscuriceps* (Poppius, 1909), *Oxycarenus (Oxycarenus) lavaterae* (Fabricius, 1787), *Leptoglossus occidentalis* Heidemann, 1910, *Megalotomus junceus* (Scopoli, 1763), *Liorhyssus hyalinus* (Fabricius, 1794), *Thyreocoris fulvipennis* (Dallas, 1851), and *Chlorochroa (Rhytidolomia) juniperina juniperina* (Linnaeus, 1758) are presented. The following new host plants are given: *Stachys alpina* for *Macrotylus solitarius* and *Thuja occidentalis* for *Chlorochroa juniperina*.
